HERE BEGINS
HACK CLUB RSET

Coding is a
Superpower

Learning to code is incredibly like gaining a superpower: it transforms you from a user to a creator. All of a sudden, computers became an effective tool for creation.

Make From Anywhere

There's never been a better time for content creation. Anyone with a laptop and an internet connection can learn to make an app or program. Building components virtually has never been so globally democratized.

Learn, Teach, Hack

The goal of Hack Club is to help you become a developer in all aspects. We want a community in our college where people are creating fascinating programs with code, making it more exciting. Sharing our knowledge with the community and together creating an ambient space to grow, to make coding accessible to everyone.

Start Building

Most coding classes teach you programming concepts instead of how to write real code—it's like trying to learn carpentry without any wood. So at Hack Club, you learn to code entirely through self evaluation. You start with no experience and build and ship a project every meeting.

Learn as You Build

Just as the best carpenters didn't learn in the classroom, neither did the best programmers. Through our [workshops](#), you'll be walked through building projects. Starting out, you may not grasp how the code works, but you develop more insight as you go. You may get stuck along the way, but we're definitely here to assist.

Be Part of A Community

Hack Club gives you a worldwide community of thousands of other young, aspiring and experienced programmers to talk to. We're artists, writers, engineers, tinkerers, campers, filmmakers, volunteers. We code. We help one another. We have fun. All that matters is your eagerness to participate.

Join the Movement!

~ PHILOSOPHY ~

By the Students, For the Students

Learning to code is uniquely like gaining a superpower—turning you from a user of technology into a creator. So it shouldn't be taught like a class—it should be a creative, inclusive and interactive space. To foster this environment, every Hack Club is student-led & members make self-directed projects. Rset Hack club intend to create such an environment.
